CARRERA: INGENIERIAS

EXAMEN PARCIAL 1

Nombre del alumno/a: **Jorge Parra Hidalgo** Matrícula:**13104**

ALL WINDOWS IN YOUR COMPUTER **MUST BE CLOSED,** WITH THE EXCEPTION OF THE EXAM WORD DOCUMENT.

IN THE EVENT OF CHEATING, THE STUDENT WILL BE REMOVED FROM THE PREMISES AND A ZERO WILL BE THE GRADING FOR PARTIAL 1

After you finish, send the file to me, mike-jaquez@hotmail.com and confirm I receive it

Section 1 – Transforming Opinions (30 points, 6 points each)

Estimated time: 10 minutes

Instructions:

Rewrite the following statements to make them professional, specific, and justified.

Each answer should be at least 17 words long.

1. "This solution is better."
   I believe this solution has a 30% higher probability of success due to multiple factors such as fabrication costs therefore we have considered and evaluated other possible manufacturing processes that could be applied.

2. "I have leadership skills."

   I have been in charge of a team of 17 people developing a school mobile app from scratch and led the project entirely, therefore I have experience and knowledge about leadership in medium-size projects solving day-to-day problems and evaluating them according to the company's standards.

3. "This project is risky."
   The current project has a high chance of 67% of not performing according to our predictions because we have gone over possible consequences that could make the company go bankrupt therefore we might take into consideration the possibility and we will be revaluating it to look forward to find a better way to approach it in the future.

EXAMEN PARCIAL 1

4. "Remote work is effective."

   Various papers and researches of the university of El Paso have shown that remote work is 21% more effective than regular work and produces considerable less stress on the employee, adding on top of that the fact that the employee does not have to spend in transportation (being gas or public transportation) therefore there are no reasons to say regular job is superior than remote work.

5. "Communication skills are essential for engineers."
   Communication skills are the backbone of any engineer, the reasoning of that being that no matter the knowledge in technical skills if an engineer does not know how to deliver and interact with potential partners they will inevitable fail, approximately 41% of graduated students that do not have good communication skills will find twice as hard to land a good-paying job, therefore we as engineers need to learn and express more smoothly our ideas and know how to sell our projects and more importantly, ourselves.

What Will be Evaluated:

- Clear position
- Reason included
- Specificity
- Professional tone

Section 2 – Professional Interaction (36 points, 6 points each)

Estimated time: 15 minutes

Instructions

Write one professional sentence for each situation with a minimum of 15 words each response.

1. You want to enter a discussion and build on someone's idea.
   Sorry to interrupt you, If I may add something to this idea, I firmly believe that we should not shorten the delivery dates, the reason being that our employees most likely start to stress out and that has a high chance of impacting the quality of the deliveries.

2. You need to politely interrupt during a meeting.
   Excuse me for interrupting you, could I say something? I would like you to elaborate more on the 3rd point you just explained, I did no fully get what was the reasoning behind it.

3. The discussion is off-topic and must be redirected.
   I would like you to emphasize and refocus on the main topic the discussion, I believe that you are branching out and not targeting the main point, so if you like I could clarify what we are talking about so we can reach an agreement.

4. You want to respectfully disagree with a classmate's idea.

   I get what you are going for and your point of view is totally valid, however the data you have given is out of date and recent papers have proven that not to be true, therefore you should reevaluate your argument with an up to date data backing that up

5. You want to ask a follow-up question in a professional discussion.
   So given the information you have provided, what are the pros and cons of the increment in ram sticks prices and how could it affect our monthly revenue.

6. You want to summarize the group's main idea before concluding.
   Going over really quick of what we have said all of us so far to sum it up, we strongly believe that firing 12% of the company's employees is not a good idea and we should find other ways to have higher revenue margins.

What will be Evaluated:

- Appropriate structure
- Politeness
- Correct professional register
- Clarity

EXAMEN PARCIAL 1

Section 3 – Short Professional Writing Task (34 points)

Estimated time 20 minutes

Scenario:

You are applying for a Junior Engineering position in an international company.

Write a short professional paragraph (**MINIMUM OF** 180 words) where you:

- Introduce yourself
- Describe 2 relevant skills
- Provide one example of experience (use structured explanation)
- State one professional goal

What You Evaluate:

- Structure
- Skill + Context + Result logic
- Professional tone
- Clarity and coherence

I am and IT student for University La Salle currently in 8th semester, I have advanced knowledge in relational and non-relational databases such as MySQL and MongoDB and have restructured private company's databases improving 20% the efficiency of the request and deep knowledge and experience on object oriented programing, especially in low level languages such as c++ and assembly, however I also have worked with other no low-level languages such as python for generative ai projects and implementations. On my internship last year I was assigned to a team that was developing an ai

integration to the company's mobile application, I used my knowledge on it to implement an ai integration that automatically detects when the employees are in the building so the applications does not ask for any credentials, making so less friction with their day-to-day work and also determining when they are not working or out of the building so the ai can detect it and automatically close any current active session improving the security of the application, we trained it based on 2500 documents from different databases the company has so we could feed the ai with the information and train it, I used python because it has a higher impact and better performance for ai integrations. Personally, I am very passionate about AI integration in mobile or web applications and I am looking forward to work in that field in a bigger project of a bigger company.
